

Unified Case Management

AI-Powered Case Management and Auto Docketing for Federal Agencies

Modernize the Entire Case Lifecycle

Federal agencies often manage cases across disconnected systems, emails, spreadsheets, and paper-based processes. The result is duplicated effort, delayed decisions, limited visibility, and growing backlogs.

Precise's Unified Case Management Platform brings the entire case lifecycle into one configurable solution—combining AI-powered Auto Docketing, document management, workflow automation, and analytics to improve efficiency, transparency, and mission outcomes.

Demonstrated Impact

Precise's platform has demonstrated the ability to automate up to 90% of the docketing process, helping reduce manual effort, accelerate case intake, and allow staff to focus on higher-value case work.

Up to 90% Automated Docketing

A Smarter Way to Manage Cases

AI-Powered Auto Docketing

Automatically analyzes incoming information, extracts key details, creates a case, assigns a docket number, and routes work to the appropriate team.

Unified Case Management

Manage intake, documents, assignments, approvals, deadlines, correspondence, and reporting from one integrated platform.

Workflow Automation

Standardize processes with configurable workflows, automated routing, notifications, approvals, and workload management.

Operational Insights

Gain greater visibility into case status, workloads, deadlines, backlogs, and performance through real-time dashboards and AI-assisted reporting.

Mission Impact

By replacing fragmented, manual processes with an integrated digital platform, agencies can spend less time managing administrative tasks and more time advancing the mission.

- ✓ Faster case intake and processing
- ✓ Reduced manual data entry and administrative burden
- ✓ Greater consistency across workflows
- ✓ Improved case tracking and accountability
- ✓ Increased visibility into workloads and case status
- ✓ Improved service delivery
- ✓ Better support for backlog reduction
- ✓ More informed and timely decision-making

How It Works

1. Receive

Accept requests through web portals, email, uploaded documents, APIs, or integrated systems.

2. Analyze

AI reviews incoming information and extracts the key details needed to initiate a case.

3. Create

The platform creates a new case, assigns a docket number, and prepares it for processing.

4. Route

Configurable business rules direct the case to the appropriate workflow and work queue.

5. Manage and Resolve

Staff review information, manage documents, collaborate, complete approvals, track deadlines, and resolve cases within one unified environment.

Human oversight remains central throughout the process, with AI supporting—not replacing—agency decision-making.

Built for Federal Modernization

The platform can be configured to support a broad range of federal case management needs, including:

- Investigations
- Appeals
- Hearings
- Compliance
- Licensing
- Grants management
- Applications
- Correspondence
- Evidence management
- Work assignments
- Audit history
- Reporting and analytics

Why Precise?

Precise helps federal agencies turn complex operational challenges into practical modernization solutions.

Precise has developed a working platform that demonstrates how agencies can reduce administrative burden, improve operational efficiency, and modernize the full case lifecycle without losing human oversight or control.

Our Unified Case Management Platform brings together:

- ✓ AI-powered Auto Docketing
- ✓ Integrated case and document management
- ✓ Configurable workflow automation
- ✓ Intelligent work queues and routing
- ✓ AI-assisted reporting and analytics
- ✓ Flexible capabilities that can adapt to diverse federal mission needs

Ready to Modernize Your Case Management?

Every agency's processes, systems, and mission requirements are different. Precise works with agency teams to understand current challenges and demonstrate how a configurable Unified Case Management solution can improve efficiency, visibility, and mission delivery.
